DETAILED ACTION

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on October 1, 2003 has been entered.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 57-58, 61 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

For claims 57-58, it is disclosed in the instant specification, page 47, lines 30-36, that the first column has a diameter of 21" and the second column has a diameter of 4", the ratio of the second diameter to the first diameter is $4/21$ ($= 0.19$). However, the limitation of "about 0.20" as required in the instant claims 57-58 would include values

Art Unit: 1754

higher than 0.20, such as 0.21. There is no support in the instant specification for any value greater than 0.19.

For claim 61, applicants are requested to point out support for the negative limitation of "the second scrubbing liquid is not recirculated". It is noted that on page 46, lines 4-5 of the instant specification, it is disclosed that because the second column has smaller column size, the "required water flow rate is low enough so that fresh make-up water *can* be used for this purpose". This disclosure, however, does not sufficiently support for the above mentioned negative limitation, because the fresh make-up water *can* be used, not *must* be used, and even when fresh make-up water was used in the second scrubbing column, the second scrubbing solution still can be recirculated to a different part of the process beside the second scrubbing column.

Claims 21, 26-27, 51-54 are allowed.

Applicant's arguments with respect to claims 21, 26-27, 51-54, 57-58, 61 have been considered but are moot in view of the new ground(s) of rejection.

The art rejections under 35 USC 103 are withdrawn in view of the declaration filed October 1, 2003. The declaration shows that the smaller diameter size of the second column provides a better result.
